# Calculation Policy - Concrete, Pictorial and Abstract

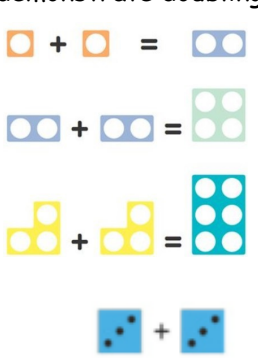

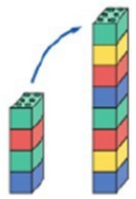

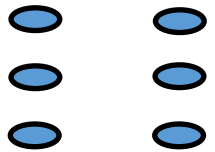

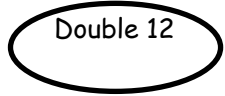

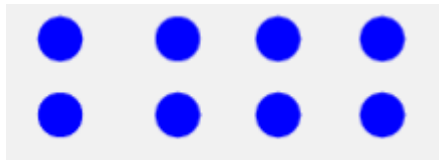

Concrete, Pictorial, Abstract (CPA) is a highly effective approach to teaching that develops a deep and sustainable understanding of maths in pupils.

- **Concrete** is the "doing stage, using concrete objects to model problems.
- **Pictorial** is the "seeing" stage, using representations of objects to model problems. This stage encourages children to make a mental connection between the physical object and abstract levels. This may include looking at pictures, drawing representations or diagrams.
- **Abstract** is the "symbolic" stage, where children are able to use abstract symbols to model problems. Children are introduced to mathematical symbols, for example +, -, x, ÷ to indicate addition, subtraction, multiplication and division.

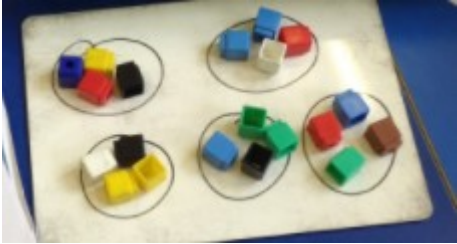

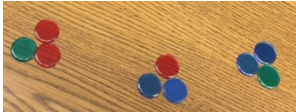

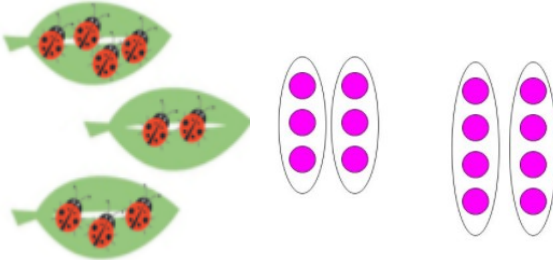

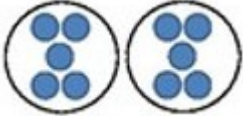

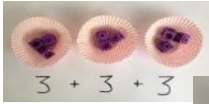

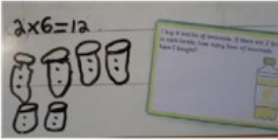

# Calculation Policy—Multiplication

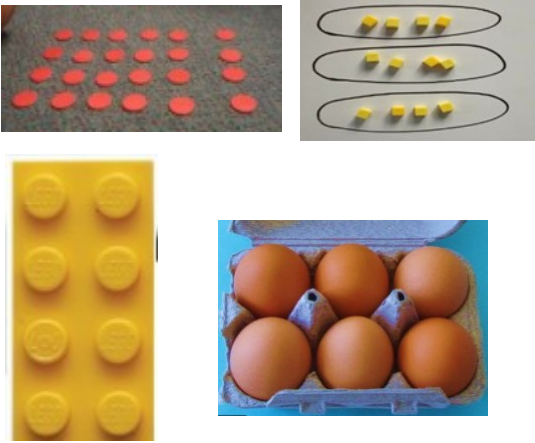

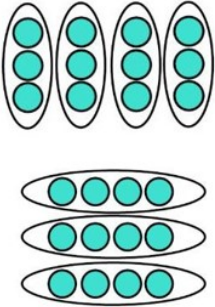

Key language: doubling, times, multiply, multiplied, repeated addition, lots of .

	Concrete	Pictorial	Abstract
Doubling	<p>Use practical manipulatives including cubes, Numicon and real life objects to demonstrate doubling.</p> <p></p> <p></p> <p></p> <p>double 4 is 8</p>	<p>Double 4 is 8</p> <p></p> <p>Drawing pictures to represent doubling</p> <p></p>	<p><math>3 + 3 = 6</math> <math>4 + 4 = 8</math></p> <p>Partitioning a number before doubling.</p> <p></p> <p><math>10 + 10 = 20</math> <math>2 + 2 = 4</math> <math>20 + 4 = 24</math></p>
Counting in multiples 2s, 5s, 10, and 3s. (skip counting)	<p>Count the groups as children are skip counting, children may use their fingers as they are skip counting.</p> <p></p>	<p>Children draw representations to show counting in multiples.</p> <p></p>	<p>Count in multiples aloud.</p> <p>Write sequences with multiples of numbers including working out missing numbers in sequences.</p> <p>2, 4, 6, 8, 10, 5, 10, 15, 20, 25, 30, 30, __, 50, __, 70.</p>

# Calculation Policy—Multiplication

	Concrete	Pictorial	Abstract
Making/recognising equal group	 <p>Using manipulatives to make equal groups.</p> 	<p>Using pictures or drawings to recognise and make equal groups.</p> 	 <p>2 groups of 5</p> $2 \times 5 = 8$
Repeated addition	<p>Children use concrete objects to make repeated addition number sentences.</p> <p>Skip count to work out the answer.</p>    <p>5      10    15      <math>5 + 5 + 5 = 15</math></p>	<p>There are 3 sweets in one bag. How many sweets would there be in 5 bags?</p>    <p>Children begin to recognise the relationship between repeated addition and multiplication.</p>	 <p><math>2 + 2 + 2 + 2 + 2 = 10</math>      <math>2 \times 5 = 10</math></p> <p>Write number sentences to describe pictures or objects.</p>

# Calculation Policy—Multiplication

	Concrete	Pictorial	Abstract
<p>Multiplication— using arrays to show multiplication is commutative.</p>	 <p>Children use concrete objects to make arrays and spot them in everyday life.</p>	<p>Draw arrays in different rotations to show multiplication is commutative .</p>  <p>4 groups of 3  <math>4 \times 3 = 12</math></p> <p>3 groups of 4  <math>3 \times 4 = 12</math></p>	<p>Use an array to write multiplication sentences and reinforce repeated addition.</p>  <p><math>5 + 5 + 5 = 15</math>  <math>3 + 3 + 3 + 3 + 3 = 15</math>  <math>5 \times 3 = 15</math>  <math>3 \times 5 = 15</math></p>

# Calculation Policy—Division

Key language: share, equally, groups of, divided by, division.

	Concrete	Pictorial	Abstract
Sharing	  <p>10 cubes shared equally between 2 groups.</p>	<p>Sharing:</p>  <p>4      4      4</p> <p>12 shared between 3 is 4</p> <p>Children use pictures or shapes to share quantities into groups or using a bar model.</p> 	$20 \div 5 = 4$ <p>Use recall of division facts or the inverse multiplication facts</p> $5 \times 4 = 20$ <p>So</p> $20 \div 5 = 4$
Division as grouping	<p>Divide quantities into equal groups.</p> <p>Use cubes, counters, objects or place value counters to aid understanding.</p>  	<p>Use a bar model to split the number into groups and share equally.</p>  $20 \div 5 = ?$ $5 \times ? = 20$	$25 \div 5 = 5$ <p>Divide 25 into 5 groups. How many are in each group?</p> <p>Count in 5s until you reach 25. How many 5s are in 25?</p>

# Calculation Policy—Division

	Concrete	Pictorial	Abstract
Division with arrays	 <p>Link division to multiplication by creating an array and thinking about the number sentences that can be created.</p> $15 \div 3 = 5 \quad 5 \times 3 = 15$ $15 \div 5 = 3 \quad 3 \times 5 = 15$	<p>Draw an array and use lines to split the array into groups to make multiplication and division sentence.</p>  $15 \div 3 = 5 \quad 5 \times 3 = 15$ $15 \div 5 = 3 \quad 3 \times 5 = 15$	<p>Find the inverse of multiplication and division sentences by creating eight linking number sentences.</p> $7 \times 4 = 28$ $4 \times 7 = 28$ $28 \div 7 = 4$ $28 \div 4 = 7$ $28 = 7 \times 4$ $28 = 4 \times 7$ $4 = 28 \div 7$ $7 = 28 \div 4$
